Abstract

Wiki personalization for university is a web-based application with basic functionalities which for students and lecturers manage materials. Lecturers can upload materials to the website. Students can view and reserve the materials.

The purpose of this research is to develop a website of wiki personalization for university personnel with basic wiki features and functionalities required by students and lecturers to provide better service to students and lecturers. An evaluation is carried out to gather students’ point of view, problems encountered and their likes and dislikes about the features and functionalities of current personalization of wiki website. The research methodology used in this report is questionnaire. To achieve the aim of the research, the application was developed to fulfill the requirements of students. The development of the application involves several testing such as unit testing, integration testing and system performance testing. The model is developed according from the result of the survey.
