Pharmaceutical Sciences

About the Faculty of Pharmaceutical Sciences

The Faculty of Pharmaceutical Sciences strives to establish itself as an important research centre for innovative research in the various areas of pharmaceutical sciences especially in clinical pharmacy, pharmaceutical chemistry, pharmaceutical technology and pharmaceutical biology. The Faculty of Pharmaceutical Sciences has an established track record of training pharmacists and scientists since its founding in the year 2000. The Faculty offers both undergraduate and postgraduate programmes with an

emphasis on serving the community. It has collaborated with hospitals, community pharmacies, pharmaceutical and other manufacturing industries. The Faculty of Pharmaceutical Sciences conducts the Bachelor of Pharmacy (Hons) degree, Master of Clinical Pharmacy Practice, Master of Science in Pharmaceutical Chemistry, Master of Science in Pharmaceutical Technology and Doctor of Philosophy (PhD) Pharmaceutical Sciences. The Faculty is comprised of dedicated academics, cutting-edge teaching and research facilities with seven fully equipped teaching laboratories and a research laboratory. Through its curricula at both the undergraduate and graduate levels, the school aims to train world leaders in the pharmaceutical sciences. In accordance with this, the education programmes cover not only the basic sciences, but also specialised sciences associated with industrial drug discovery and development, the theorisation of pharmacotherapy theories at medical institutions, and the science behind governmental pharmaceutical regulations.

Research is a significant component in the Faculty of Pharmaceutical Sciences. Lecturers who are also experienced researchers lead the Faculty's postgraduate programmes. This integration of coursework with research findings in our teaching enables learners to understand and extend their power of creativity and critical thinking in their pursuit towards acquiring new knowledge.

As the accumulated knowledge and new technologies produced by the pharmaceutical sciences fraternity increase and as the field continues to play an increasingly important role in internationalisation, society's awareness of its importance is also rising. The Faculty of Pharmaceutical Sciences seeks to expand its horizons and develop new cooperative links with various other disciplines of sciences such as medicine and information technology in order to implement its academic theories and contribute to a healthier world.

An abstract geometric design featuring a dark blue background. A vertical rectangular bar in a lighter blue shade is positioned on the right side. A horizontal bar in a darker blue shade extends from the left edge towards the center. These two bars intersect, and a triangular shape in a medium blue shade is formed at the bottom right of the intersection.

PHARMACY**

Full Name:

Fazlollah Keshavarzi

Designation:

Assistant Professor

Department:

Clinical Pharmacy

Research areas or topics:

- Post-licensure safety surveillance for human papilloma virus vaccine in Malaysia (Project for Master of Clinical Pharmacy Practice)
- A cross-sectional study of public knowledge, attitude and practice towards counterfeit, and adulterated medicines in Kuala Lumpur, Malaysia
- Malaysian Hospital Pharmacists' Perception and Attitude toward Medication Error Reporting: A Qualitative Study
- Assessment of knowledge, attitude and practice of Malaysian women towards Osteoporosis.
- Course Satisfaction and Perception of Malaysian Provisionally Registered Pharmacists toward Their Training; A Qualitative Study
- Prevalence of Atopic Dermatitis and Pattern of Drug Therapy in Malaysian Children
- Knowledge, attitude and practice of Malaysian women towards periconceptional use of folic acid

Summary of selected research work:

Prevalence of Atopic Dermatitis and Pattern of Drug Therapy in Malaysian Children

This survey was conducted in Kuala Lumpur among children selected from various kindergartens. The prevalence of atopic dermatitis was identified for the first time in Malaysia, using a validated scoring system. Moreover, the pattern of drug use by parents was explored. The findings were published in the Journal of Dermatitis in 2018.

Evaluating electronic cigarettes (ECG) dependency with tobacco cigarettes (TCG) among ex-smokers who converted to e-cigarettes

Summary of selected research work:

There have been heterogeneous regulatory responses about ECG that range from no regulation to complete bans. ECG need to be appropriately regulated in Malaysia. This study will evaluate the dependency of ECG by equivalent modified Fagerstrom test for nicotine dependence (FTND) scale and retrospectively compare them with dependency to tobacco cigarettes by original FTND scale among ex-smokers who had shifted to ECG use. The outcomes of the study will raise awareness amongst the consumers and policy makers about the addiction to ECGs. The study findings will also help in preparing the guidelines and vaping regulation in Malaysia.

Clinical Pharmacy

Research areas or topics:

- Pharmaceutical care issues in patients with atrial fibrillation receiving thromboprophylaxis
- Complementary, alternative medications and adherence to antiepileptic therapy

Summary of selected research work:

Complimentary and alternative medications and adherence to antiepileptic therapy:

The use of CAMs may vary due to the difference in cultural norms and healthcare settings. This study identified the usage pattern of complementary and alternative medicine (CAM) and its impact on antiepileptic drug (AED) adherence amongst patients with epilepsy. The most common reason for inadequate AED therapy and higher dependence on CAM was the patients' belief that epilepsy had a spiritual or psychological cause, rather than primarily being a disease of the brain.

- Perception and acceptance of pharmacogenetic testing among the general public in the Federal Territory of Kuala Lumpur, Malaysia
- Community pharmacists' intentions to report adverse drug reactions (ADRs) in Malaysia using the theory of planned behaviour: a cross-sectional study in Johor, Malaysia.

Summary of selected research work:

Exploring antibiotic use and practices in a Malaysian community

This study examined the pattern of antibiotic use and the practice among individuals in a Malaysian community. The study found that most individuals obtain antibiotics through prescriptions. Factors identified to be significantly associated with a greater likelihood of non-compliance with a full course of prescribed antibiotic treatment were male gender, lack of knowledge of antibiotic functions, and lack of awareness of antibiotic resistance. The study pointed out that patients education and counselling on antibiotics and antibacterial resistance are important to enhance compliance to antibiotic therapy and prevent antimicrobial resistance (AMR).

- Pharmaceuticals as emergent pollutants in the aquatic environment
- The roles of pharmacists in the safe usage of herbal products; assessing the public's knowledge on herbal products
- Beliefs and perceptions amongst breast cancer patients in relation to the usage of herbal medicine
- Design and development of a patient-focused medication adherence plan

Summary of selected research work:

Pharmaceuticals as emergent pollutants: This research programme studied the impact on the ecosystem due to the pollution levels of the aquatic environment by pharmaceuticals. This important public health topic is closely related with United Nations' Sustainable Development Goals.

Usage of herbal medicines: Herbal medicines has been primarily utilised before the development of modern medicines. There are concerns on the usage of herbal medicine without proper evidence. In addition, the research focused on the public's awareness level on the potentially harmful effect from herbal medicines, herb-drug and herb-disease interactions.

Full Name:

**Dr Bontha Venkata
Subrahmanya Lokesh**

Designation:

Assistant Professor

Department:

Pharmaceutical Chemistry

Research areas or topics:

- Molecular modification of anticancer agents conjugated with polymers and targeted drug delivery design. Synthesis and biological evolutions of novel heterocyclic compounds from novel chalcones
- Stability Indicating Assay (SIA) and method development on anticancer drugs, antiviral drugs and their stability testing studies by HPLC, advanced spectroscopic techniques like IR, NMR, and MS Spectroscopy
- Dissolution method development and enhancement of solubility characteristics of water in soluble drugs

Summary of selected research work:

The research is focused on analytical method development of new molecules not in pharmacopoeia, synthesis of novel chalcones of anticancer potentiality, polymeric conjugation of novel drugs delivery for anticancer activity, nanoparticles and technology, cytotoxicity studies, synthesis and molecules docking.

Representative Publications:

Lokesh, B.V.S. and Palanirajan,V.K. Synthesis and Characterization of Polymeric conjugated sirolimus on MCF-7(Estrogen positive) and MDA MB 231(estrogen negative) Breast Cancer Cell lines. Int J Pharm, 2014, 4(1):42-51.

Full Name:

Dr Shaik Ibrahim Khalivulla

Designation:

Assistant Professor

Department:

Pharmaceutical Chemistry

Research areas or topics:

- HPLC, GC and FTIR method development and validation techniques for determination of pharmaceutical drugs
- Phytochemical analysis and chemical characterisation of bioactive plant extracts for wound healing, anticancer and oral toxicity studies
- Design, synthesis and evaluation of active secondary metabolites for Alzheimer disease

Summary of selected research work:

The research involves the study of bioassay guided isolation and spectral characterisation of active natural products and to subsequently synthesise their analogues in drug discovery and development research.

PHARMACEUTICAL
TECHNOLOGY**

Full Name:

Dr Palanirajan Vijayarajkumar

Designation:

Associate Professor

Department:

Pharmaceutical Technology

Research areas or topics:

- Formulation of vaccines containing live recombinant
- Recombinant protein delivery systems
- Drug delivery systems and evaluation techniques
- Nutritional supplement formulation

Summary of selected research work:

The ongoing research is on conventional and nanoparticulated drug delivery systems, dendrimers, novel ligands for targeted drug delivery system, recombinant proteins, live vaccines and phytochemicals delivery systems.

Full Name:

Dr Ashok Kumar Janakiraman

Designation:

Assistant Professor

Department:

Pharmaceutical Technology

Research areas or topics:

- Preparation and characterisation of self-micro emulsifying drug delivery system
- Development and evaluation of sustained release matrix tablets
- Development and evaluation of transdermal patches

Summary of selected research work:

The research is focused on the study of self-micro emulsifying drug delivery systems (SMEDDS) for enhancing the oral bioavailability of poorly water-soluble drugs.

Representative Publications:

Full Name:

Melbha Starlin Chellathurai

Designation:

Lecturer

Department:

Pharmaceutical Technology

Research areas or topics:

- Oral drug delivery systems
- Transdermal drug delivery systems
- Teaching and learning methodologies for pharmaceutical calculations

Summary of selected research work:

The research work revolves around the formulation and evaluation of transdermal microneedles for a regenerative drug. Transdermal microneedles for a macromolecular drug was prepared using cost-effective molding fabrication technology to evaluate its design and release characteristics. Adopting a flipped classroom approach for Pharmaceutical Calculations, the aim of the study was to explore the flipped classroom model as a student-centered learning in the teaching and learning of pharmaceutical calculations. Students were exposed to a series of vodcasts (pedagogically segmented chunks of video lectures) which accentuates their self-paced and self-regulated learning. These vodcasts underlined the step-by-step process of pharmacokinetic calculations. Subsequently, a survey was administered to measure students' learning experience and learning engagement in the flipped classroom approach.

Full Name:

Dr S M Habibur Rahman

Designation:

Assistant Professor

Department:

Pharmaceutical Technology

Research areas or topics:

- Development of solid lipid nanoparticles for enhanced solubility and bioavailability
- Pharmacokinetics of nanoparticles
- Nanotechnology for improving solubility and dissolution method development

Summary of selected research work:

The core research area is focused on improving the solubility thereby bioavailability of drugs and nutraceuticals. The nanotechnology approach was broadly adopted in improving the bioavailability.

Representative Publications:
