

The Institute of Computer Science and Digital Innovation (ICS DI) was established to advance innovation through technology and to ensure its graduates are prepared for various kinds of challenges posed today and tomorrow. As such, programmes offered by the Institute are skewed towards specialisation for niche industries of the modern world. We train students to tackle complex challenges and build their competencies in various branches of Computer Science and Information Technology. Over the years ICS DI has established relationships with key industrial partners. With these partnerships, students attend training and other sessions that would shape their mind towards developing cogent ideas for business solutions. The faculty consists of a strong team of leading senior researchers as well as a mix of young minds. Many of the alumni are involved in various positions in the industry as well as related careers.

We will assist and challenge you to reach greater heights!

Professor Datin Dr. Sameem Binti Abdul
